Light barrier amplifier

IMX-N840

Features

- Multichannel amplifier with modulated infrared light
- 8-channel installation system for tight assembly wihout cross talk
- Range up to 40 m (131 ft)
- Sensitivity for each channel adjustable
- One relay output for each channel (normal open) ٠
- System power 20%/100% selectable by bit switch
- Programmable light/dark function
- Adjustable switch-on and switch-off delay for channel one
- Light curtain mode
- Master-slave mode
- Transmitter and receiver terminals are short circuit proof

Ordering Table

Operation voltage	Order code
230 V AC	IMX-N840/230VAC
115 V AC	IMX-N840/115VAC
24 V AC	IMX-N840/24VAC
24 V DC	IMX-N840/24VDC
Accessories	Order code
Protective enclosure	PanBox 1x8

Protective enclosure

Safety Instructions

The infrared light barriers IMX-N840 are not safety systems and should not be used as such systems. The devices are not to be used for applications, where personal safety is dependent on their function.

Short Description

On the 8-channel multiplexer with manual gain setting can work up to eight Sensor heads (transmitter and receiver) without the possibility of cross talk.

The multipexer has one relay output (normal open) and a yellow status LED for each channel.

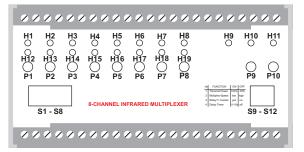

Different working conditions can be selected, according to the application, for each channel on the front side of the device by easy accessible DIP-switches. Consequently, the user is able to change the sensitivity value, which is adjusted to needed range and pollution, for increasing the fine adjustment of the potentiometer or to optimize the object recognition. The light curtain mode enables, that all outputs have an effect on the output from channel number one.

If more than eight channels are required, multiple 8-channel multiplexers can be connected to synchronize them by master-slave operation. In this way, an influencing signal between the multiplexers will be prevented.

Infrared transmitters and receivers in different, compact and robust designs are described in the sensor heads datasheet.

Device Overview

Displays and operating elements

- H1-8 Output status indicator (yellow)
- H9 Slave operation indicator (yellow)
- H10 Light curtain mode (yellow)
- H11 Power ON indicator (green)
- H12-19 Sensitivity indicator (green)
 - P1-8 Sensitivity adjusters (channel 1 8)
 - P9 Switching ON delay (relay no. 1)
 - P10 Switching OFF delay (relay no. 1)
 - S1-8 Switching mode (channel 1 8)
- S9-12 Functions

Dipswitch S1-S12

Connection Diagram

Before connecting the amplifier, look on the type plate and check if the power supply is the same as the connection value. Other values can impair the unit functions or destroy the amplifier.

The AC-supply devices are isolated from main. A grounded connection on the low voltage side is required. In synchronized operation of multiple devices (master/slave), we recommend installation using short connecting cables.
